

Private, secure surveillance is made simple from your mobile phone with the LiveEye plug and play solution by SouthWing. Keep an eye on your property and loved ones from anywhere in the world on your mobile phone.

### Plug & Play

Configuration is automatic when first turned on with the best mode of transmission always chosen. The LiveEye works with all 3GPP compliant RTSP streamers available on 3G handsets. Video adapts to be best in quality on available bandwidth. Consulting and activating motion/noise detection are done via SMS commands or through the LiveEye's internal online WEB interface.

### Privacy

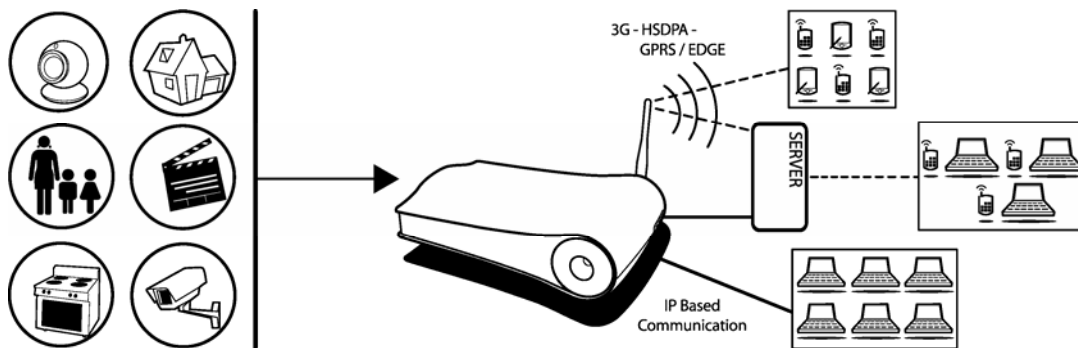

A one-time private IP address is utilized for point-to-point transmission with to a mobile phone that ensures no-one will be watching your home and family besides you. The master user controls who has access to the LiveEye through the internal web-interface.

### Motion and Noise Detection Alerts

When motion or noise is detected, the user will receive an SMS text message with a link to view the feed. The user can choose to watch live or watch only the recorded motion/noise detection. A built-in microphone detects and monitors noise levels lasting longer than 50 milliseconds with adjustable sensitivity with WEB interface. The recorded motion is maximum 1 minute long and starts 5 seconds before the motion and ends 10 seconds after motion ceases.

### Point – to – Point and Server Based Streaming

LiveEye has its own built-in secure WEB and Video streaming servers which ensure the privacy and integrity of the user's property and loved-ones. The video stream can also be pushed to a wireless provider server for extra value-adding features and management.

### Expansion and Storage

Up to 5 Axis 207W cameras can be linked to a single LiveEye with motion detection. As soon as you pair them and switch them on they will be recognized automatically and allow you to view these cameras on your mobile phone and PC/laptop. All motion and noise detections will be stored automatically on an external USB stick or USB HD. Up to 4 days of movement alert recordings can be stored locally on a 1 GB USB stick.

### Built-in 3G Wireless Broadband Router

Operates the same as a HSDPA/3G/EDGE/GPRS data-card, connect to your PC or Laptop via WiFi and enjoy high speed mobile broadband functionality.

### Other Features:

- Infra-Red LEDs- see in dark up to 4 meters distance.
- 2-hr Battery Backup- SMS message to master user when power has been lost and restored.
